Optimize your X-ray QA workflow and improve document control with OneQA

The OneQA software integrates seamlessly with the Raysafe X2 system, enabling streamlined radiation imaging equipment maintenance, from procedure setup through final reporting. Physicists and service engineers can rely on OneQA to help them reduce manual data entry, improve data integrity, and standardize the overall quality assurance process.
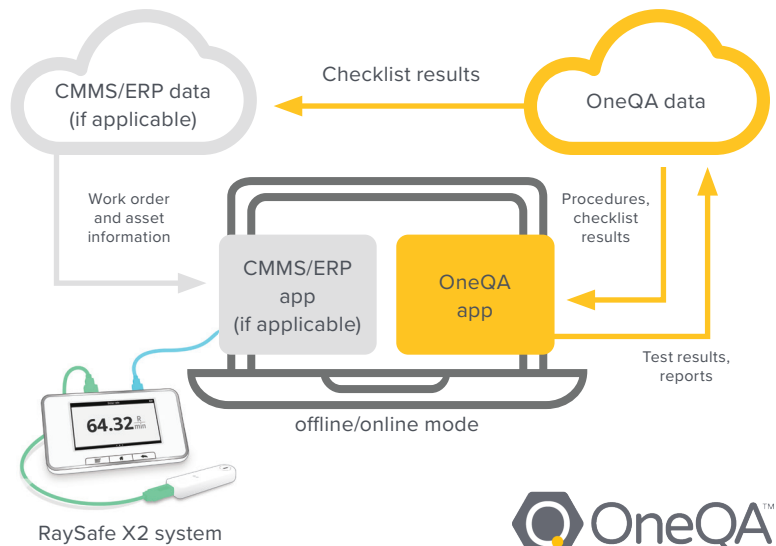

Standardization and Procedure Management

Documentation and Reporting

Assisting you in quality assurance for diagnostic x-ray

- Run OneQA procedures using RaySafe X2 data
- Export a finalized procedure as a generic or customized report
- Update your work orders with test results and reports using OneQA's pre-built CMMS/ERP integrations
- Synchronize procedures and templates across the organization using centralized cloud storage
- Define who can set up and change procedures and reports with User Account Controls
- Perform job tracking as an administrator
